Stainless steel resurfacing blade

Durable. Light. Safe. STAINLESS.

WM TECHNICS

More than just a blade.

The new stainless steel resurfacing blade from WM technics for Mammoth and evo²

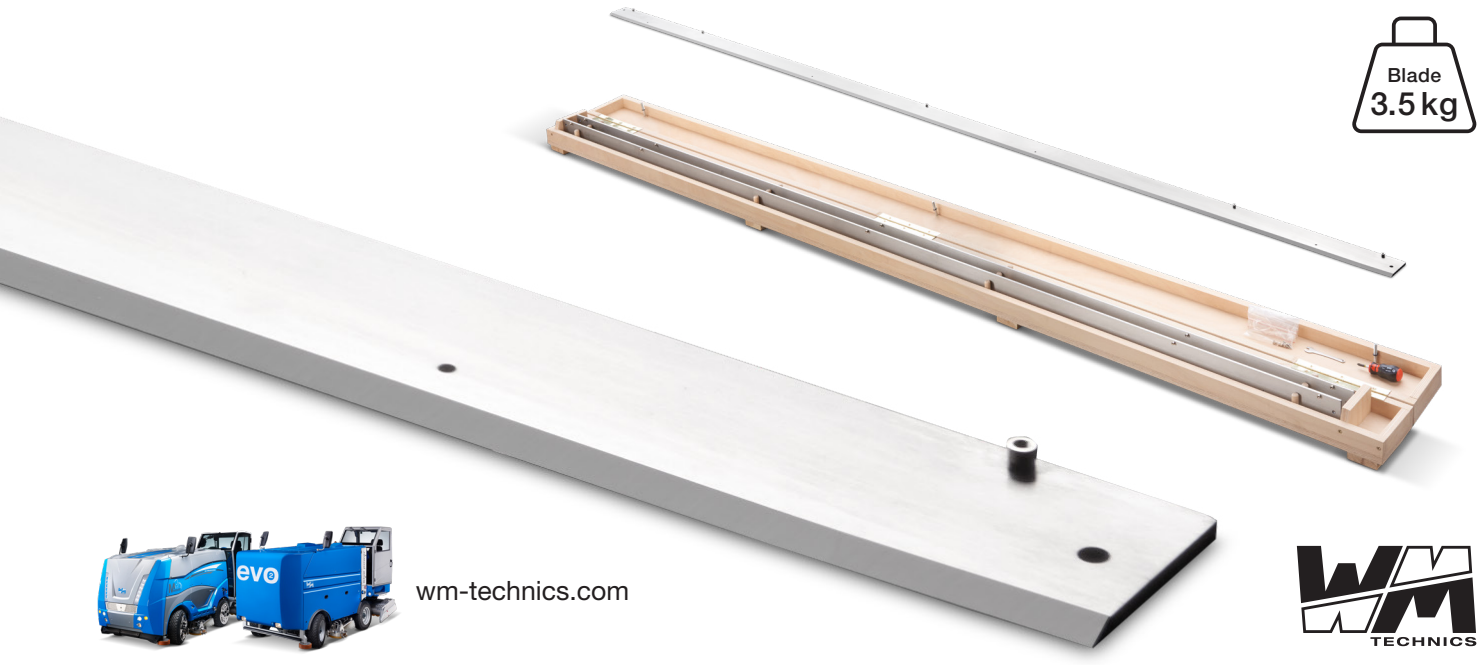

The new stainless steel ice resurfacing blade from WM technics heralds a new era in professional ice preparation. The blade boasts an exceptional service life, minimal weight and maximum safety, thus setting new standards for operators of ice rinks and ice arenas.

Thoroughly tested under real-world conditions, the stainless steel blade can offer a service life of around four times longer than conventional carbon steel blades. Longer intervals between honing mean less maintenance, lower running costs and more uptime for your ice-preparation machine.

Your benefits at a glance

- ✓ High-performance stainless steel with extreme hardness, excellent wear resistance and good corrosion resistance
- ✓ Up to four times the service life of conventional carbon steel blades
- ✓ Weighs just 3.5 kg approx.
- ✓ The lightest resurfacing blade in the ice-preparation machine sector
- ✓ Blade can be changed in less than a minute
- ✓ Significantly lower operating and maintenance costs
- ✓ Improved safety thanks to simple, convenient handling
- ✓ Available for Mammoth and evo² models
- ✓ 2300 series blade available from mid-September
- ✓ 2100 series blade available from mid-October
- ✓ Introductory price for orders and deliveries in 2026 comparable to carbon steel blades
